## 8.2 EXPOSURE CONTROLS

Direct contact with the product is provided for its normal use (see point 1.2), for this reason no damage is expected in the event of exposure. The following protective measures are therefore intended to minimise any risk.

- Appropriate engineering controls: Ensure good ventilation in the workplace through an effective local aspiration. Individual protection measures must bear the CE marking which certifying their compliance with current regulations. Exposure levels should be kept as low as possible to avoid significant accumulation in the organism. Manage individual protection measures in such way as to ensure maximum protection (replace periodically and before deterioration). Please refer to point 7 above for further information;
- Individual protection measures (it is recommended to use only "CE" marked devices):
  - Eyes and face protection: Protective goggles to prevent splashes of product coming into contact with the eyes;
  - Skin protection: Not required. For hand protection, however, we recommend the use of disposable protective gloves suitable for handling the product due to their impermeability and stability.
  - Respiratory protection: Ensure sufficient ventilation and aeration in the place of the use. Furthermore, it is recommended to wear a mask.
